- **67** a を正の定数とする. 2 次関数 $f(x) = x^2 4x 2$ $(0 \le x \le a)$ について、以下の問いに答えよ. (1) a = 4 のとき, f(x) の最大値を求めよ.
 - (2) f(x) の最大値 M(a) を求めよ.
 - (3) f(x) の最小値 m(a) を求めよ.
 - (4) g(a) = M(a) m(a) とする. g(a) = 5 となる a の値を求めよ.

(1)
$$f(x) = \sqrt{2-4\pi-2}$$

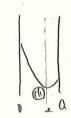

= $(\pi-2)^2 - 6$
= $\pi + \pi = 2$.

$$M(a) = \begin{cases} -2 & (& 0 \leq 4) \\ & 0^2 - 4a - 2 & (4 < a) \end{cases}$$

traces 2 const

$$m(a) = \begin{cases} a - 4a - 2 & (a < 2) \\ -6 & (2 \le a) \end{cases}$$

(4)

a	0	<u>.</u>	4
M	- 2		(a-2)2-6
M	(a-2)2-6	-6	
M-m	4- (0-2)2	4	(0-2)

(i)
$$0 < \alpha < 2\alpha \times \frac{1}{2}$$

 $4 - (\alpha - 2)^2 = 1$
 $- (\alpha - 2)^2 = 1$. This.

$$(\alpha-2)^2 = t$$
